David Kohn Architects, London (UK)

Timber contractor

Blumer-Lehmann AG, Gossau

Year of construction

2022-2024

Planning contract

Engineering of the timber structure

- incl. development of details and connections
- incl. structural documentation for execution phase

Project description

David Kohn Architects designed the building that is used as accommodation for students of the New College Oxford. The almost 1500m² large roof sits with its top floor on top of a concrete structure. For the originally in concrete designed freeform roof structure, a timber solution with LVL rafters was developed together with Blumer-Lehmann.
